Pocket-lint) - The next flagship smartphone from Samsung appears to have leaked really early as a claimed Galaxy S6 photo appears online. The photo of the Samsung Galaxy S6 was sent into Dutch news site toptienmobiel which says this is likely a prototype model of the handset. This is because of the stickers in the top right hand corner. - According to the anonymous leakster the Galaxy S6 should be made available in April by Samsung. This would suggest it will appear at the Mobile World Congress trade show in March ahead of its release. The Samsung Galaxy S6 is rumoured to come with a 5.5-inch QHD display, which appears to be crammed into a near bezel free body in this photo. According to the Korean media the new 64-bit octa-core Exynos chip from Samsung will be at the phone's heart and will able to support Cat 10 LTE 4G meaning speeds of up to 450Mbps. It should also have 3GB of RAM, a 20-megapixel camera and should have a metallic looking bumper so fingers crossed. One thing about the photo that does seem odd is Samsung's insistence on keeping buttons at the bottom. Presumably it wants to keep the fingerprint reader and so might as well use the space either side for the old fashion controls. Check out our guide on everything Samsung Galaxy S6 below. Apple iPhone 13 deals: Find out where you can find the best deals on the latest smartphones By Conor Allison · 16 June 2022 Find a low price on the Apple iPhone 13, iPhone 13 mini, iPhone 13 Pro or iPhone 13 Pro or iPhone 13 Pro Max. Samsung Galaxy S6 deals (opens in new tab) ((opens in new tab) (opens in new tab) (opens in new tab)Poor sales of the Galaxy S5 meant that a brilliant new Galaxy S6 has to happened here. When it came to the re-tooling, the Bond-esque title of 'Project Zero' was created, blank sheets of paper were pulled out left, right and centre, and presumably someone drew a rather nice phone on one of them, as that's what we've got here. Whether it's the improved camera, the metal-and-glass chassis, the oodles of power involved (from Samsung's got a lot right here. And it has to, as the competition hasn't been standing still. The iPhone 6 set a mark in the sand that Samsung was desperate to match, and HTC has marched on with its plans to keep making the world's most beautiful handsets. Samsung's pushed hard in every category, giving market-leading technology everywhere that you look with this phone This does mean the cost is a little higher, but when you're getting something this smooth, it's easy to justify spending that little bit more each month. One of the best things about the Samsung Galaxy S6 is there's nothing big to shout about. We're not going to harp on about the heart rate sensor or gesture-based control of the phone - no, this time it's all about getting the basics right. The design has been completely overhauled to make it feel like it's worth the high premium Samsung is commanding, the camera has been stripped of the pointless modes and now just takes good pictures when you want it, and even the music player is more subtle to simply get the tunes you want into your ears at the best possible quality. While we do love some of the crazier ideas here at T3 (who doesn't want an e-ink screen on the back of a phone, eh?) it's more important to get the basics right, and that's just what's happened here. That doesn't mean it's a bland-looking phone though. The design of the Galaxy S6 is completely new in some ways, but also has flavours of older phones. The lozenge-style home button makes the front look like a Galaxy S4, although the screen is a lot more prominent on the left is just where we wanted it to be, and the volume keys on the other side deliver a satisfying travel when you're looking to boost the noise. The screen on the Samsung Galaxy S6 is something to shout about, as it's got the sharpest display on the market. At QHD resolution in a 5.1-inch space, we're in love with the jaw-dropping visuals this thing can deliver. It's actually at the point of TOO much tech (although we'll never admit that's a thing) as sometimes it's hard to see what the crammed in pixels actually deliver. However Samsung's Super AMOLED technology more than makes up for that, offering brilliant visuals thanks to an infinite contrast ratio and really rich colours. Snapping happyIf we're talking about design, we should really pick up on the camera, as it's one of the most advanced we've seen on a mainstream phone. At 16MP it's not going to rival something like the Nokia Lumia 1020's 41MP sensor, but it doesn't need to. The S6's snapper is insanely good at taking low light photos, even better than the 4MP Ultrapixel of the HTC One M8, which is impressive given the amount of detail you get. The shutter speed is also really cool, allowing you to get some great snaps of fast moving objects. The Pro mode is one that caught our eye, as it allows you a lot of control for those that like to tinker to get the perfect shot. A particular favourite is the ability to manually set the focal length, as even the best autofocuses on cameras (and the S6 has a pretty good one) can misinterpret what you want.4K, slow motion, fast recording are all there too, offering up some seriously good tricks for all kinds of videographers too, so this a camera that's almost completely got you covered. The camera module itself does protrude a little bit from the back of the achingly thin device, a consequence of having to choose between style and function, so we're a little worried the lens will get scratched over time, despite Samsung trying to reassure the world that it's been covered with some pretty strong glass. Power problems If we were to point to a hole in the Galaxy S6's armour, battery life would be it. The phone has slimmed down, got a better design, taken away the removable battery pack and ultimately lost space for the power. As a result, it can only just about last the day in normal conditions, which isn't really long enough for a market-leading smartphone. It's not going to just turn to dust in your hands daily, and for many tasks it's as good as the next phone, but the LG G3 and the Sony Xperia Z3 both offer much longer-lasting power packs. If you're after a phone that can really take anything you can throw at it and show it to you in a lovely way, the Galaxy S6 is it. Whether it's the secret high resolution audio mode, the powerful video player or the ability to control your TV, this is a phone that can do it all and do it well. The music player has been refined to the point where there aren't a load of gimmicks - you can't trace your finger through a series of beep tests (listening for sounds, not performing shuttles up and down a lab) and the phone will work out how good your headphones / ears are and adjust the sound accordingly. Video also looks amazing thanks to the combination of QHD resolution and Super AMOLED technology, and with Samsung's excellent format compatibility there's very little it won't play, so you can rest assured that three hour train journey will just whizz by. And if you're at home and can't find the remote, then Samsung's chucked two remote control apps on the phone - although they're oddly the same thing. Both Peel TV and Smart Remote are built on the same app and offer identical experiences - so it really boils down to whichever colour scheme you like the most. Verdict The Samsung Galaxy S6 is a phone that the brand should rightly be proud of, and it clearly is. Why else would you release the same phone again but with curved edges in the snappily-named Galaxy S6 Edge? The design and the power of the 'normal' S6 are the real winners here, and offer a phone that really appeals to the masses and tech-fiends alike. The loss of the microSD slot might irk some users who like being able to plug loads more storage into their phones, but with a 128GB option on board there's something for them too. The Galaxy S6 is a device that we didn't think would be possible when the plastic fantastic S5 appeared, so we're glad that Samsung has been brave enough to reboot the brand in this way. There's still some headroom for making an even better Galaxy S7 though - the battery could definitely do with a bit of a boost - but for 2015 the S6 is a phone that's set the bar, and set it high. Prices - Samsung Galaxy S6: Void Active A things are happening, and when you engage with our community. Ted Kritsonis/Digital TrendsSamsung's Galaxy S6 is a beautiful phone that be delighted to learn that there's a lot more to this phone than meets the eye. You'll find that Samsung has worked hard to add value with a treasure trove of handy shortcuts and extra features. Some of them are familiar from previous Galaxy S phones, some are new entries from Samsung, and some courtesy of Google's latest Lollipop-flavored Android 5.0 release. Here are some of the best Galaxy S6 tips we've uncovered so far. Navigation, Themes, Fingerprint Sensor, Split Screen, and Camera Launch How to streamline your navigation One of the first things you should do to start customizing your S6 for your own personal needs is to pull down that notification shade and tap on Edit. Now drag and drop all the features, functions, and shortcuts you want to have easy access to into your guick settings menu and ditch anything you don't need. When you're happy with the line-up tap Done. You should also edit the Quick settings that appear at the top of the Settings to appear as large icons at the top of the list. Stick the stuff you most commonly go to in here and you'll save yourself some time. How to get the theme you want You'll find the usual batch of wallpapers and widgets when you tap and hold on any empty space on your home screen, along with the option to change your screen grid size. You'll also find Themes in here that can give your phone an entirely fresh look, changing app icons, the font, the backgrounds on your home screen, and elements of many of your standard apps, like Phone and Contacts. You can preview themes before applying them. There are only three themes on the S6 by default, but you'll find lots more to download via the Store link at the top right of the Themes page. There is also a theme tool on the way which will enable you to create your own themes. How to use the fingerprint sensor The fingerprint sensor is by far the coolest, quickest, and most secure way to unlock your Galaxy S6, so dive into Settings > Lock screen and security > Screen lock type > Fingerprints and follow the onscreen instructions. You can always add more fingerprints later or remove fingerprints in the same menu. It makes a lot of sense to use your thumb if you want to be able to unlock the phone one-handed. You also have the fingerprint sensor for Web sign-in and to Verify Samsung account. That means you won't have to enter passwords for either, you can simply scan your fingerprint instead. How to enable split screen The Galaxy S6 has a stunning, 5.1-inch display and you can have more than one app on it at the same time using the split screen function. All you have to do is hold down the apps or multitasking button at the bottom left for a couple of seconds. The bottom half of the screen will display a menu of apps you can choose from and the top half will go on displaying. If you want to change the space allocated, drag the icon in the middle up or down. You can also access more options, such as the option to flip, window, or close apps, by tapping on the circle. How to quickly launch the camera The Galaxy S6 has a fantastic 16-megapixel main camera and you can boost your chances of catching those spontaneous moments with this handy camera shortcut. Simply double tap the Home button and the camera app will launch. It works anywhere, even when the screen is off. It's worth noting that this shortcut results in a small delay when you press your Home button once, as the S6 is waiting to see if you plan on tapping twice for the camera. If you find it annoying then dip into the Camera settings and toggle Quick launch off. Selfie, Do Not Disturb, Fast Download, Screenshot, and Google Now How to take a selfie easily It's a pain sometimes framing the perfect selfie and pressing the capture button, but Samsung has an answer. Fire up the front-facing camera and line up the shot, when you're ready simply touch the heart rate sensor, under the LED flash on the back of the S6, and it will take the shot. How to turn on Do Not Disturb mode We're all guilty of using our phones a little too much and it's important to get a break now and again. This is where Do not disturb mode shines. Go to Settings > Do not disturb and you'll find a simple toggle to silence all calls and alerts. There's an Allow exceptions option, which is ideal if you're waiting for a specific call, but don't want anything else getting through. You'll also find a Set schedule tool that enables you to dictate specific hours on specific days that your S6 goes completely silent, or filters your incoming calls and alerts. Bear in mind that this doesn't actually stop the alerts or calls coming in, it just silences them, so if you do wake with a burning desire to check, then you can. How to download in a hurry If you take a look in Settings > More connection settings > Download booster you'll find the option to toggle on a speed boost for downloading large files (bigger than 30MB). It works by using LTE and Wi-Fi together, so bear in mind that it will use some of your data allowance. How to take a screenshot Hold down the Power button and the Home button together and you can capture a screenshot on your Galaxy S6. You can also turn on Palm swipe to capture in Settings > Motions and gestures. How to use Google Now is far superior. To launch Google Now you just have to hold down the Home button. You can ask it to launch apps, search the web, set reminders, and lots more. You'll have a lot more fun with Google Now if you take the time to set it up properly. You can do that by tapping the menu button at the top left in Google Now for more great tips. Private mode, Security, Gestures, Display, and Vibrations How to use Private mode Samsung offers a really handy way to hide your sensitive photos and other files from nosy people. Head into Settings > Private mode. You even have the option to lock it with your fingerprint. How to make sure people don't snoop on your S6 The ability to pin apps on your screen was introduced by Google in Android 5.0 Lollipop. On the S6 you'll find it in Settings > Lock screen and security > Other security settings where it's listed near the bottom as Pin windows. The idea is that you can pin an app to the screen before handing your phone to stop them from browsing around, it actually locks the screen to that specific app. You tap the multitasking or recent apps button at the bottom left and then look for the pin icon at the bottom right of each open app. Samsung has taken it a little further because you can tick the Ask for Fingerprint before unpinning box when you turn it on and then hand your phone over without having to worry. How to use gestures Samsung offers some handy gesture shortcuts and they are on the Galaxy S6. Go to Settings > Motions and gestures and you'll find some options. Direct call is great — just open a contact and then lift your phone up if you've missed a call or message. Mute is a quick way to silence your S6 by flipping it over. Palm swipe to capture is an alternative way to snag a screenshot. How to get the best from your display > Screen mode and you'll find a few options to help you unlock the full glory of the AMOLED screen. If you leave it on Adaptive display then it will change automatically, but you can also pick modes called AMOLED cinema and AMOLED photo, which really ramp up the contrast and vibrancy, or you can leave it on Basic if you want something a bit closer to reality. How to get good vibrations If you go into Settings > Sounds and notifications, you'll find some handy options. You can turn vibration off for key presses or button presses in here, and decide whether you want the phone to vibrate when it rings. You also can set the vibration intensity for different things, so you could have a strong vibrate for calls and a minimal one for notifications. Smart Lock, Battery Life, and change the vibration pattern you want the phone to vibrate when it rings. Disable/Uninstall Apps, Developer Options, and 100GB Cloud Storage How to use Smart Lock Go to Settings > Lock screen and security > Secure lock and you can have your Calaxy S6 automatically unlock when it connects to specific Bluetooth devices or systems (like a smartwatch or your car), or when you are in a specific location (like your work-place or home). How to save battery life If you go to Settings > Battery you'll find detailed stats on your power usage in Battery usage, as well as an estimate of time remaining. There's also a Power saving mode and an Ultra power saving mode and an Ultra power saving mode and an Ultra power usage in Battery usage, as well as an estimate of time remaining. functionality a lot and turns the display gray. Samsung has also added a wee Abnormal battery usage section at the bottom, which can be a handy way of identifying a power-hungry app that's gone wrong. You may also want to check out our general tips for saving smartphone battery. How to disable or uninstall apps Open up the App drawer and tap Edit at the top right and you'll find you can just tap the red minus sign at the top of each app icon you don't want to get rid of it. Some apps cannot be removed, but you can get rid of or disable most things. You can also uninstall apps by long pressing on the icon and dragging it up to Uninstall at the top left. You'll also still find the option when you tap on an app in Settings > Applications. How to unlock Developer options Go to Settings > About device and tap on Build number ten times then go back to the Settings menu and you'll see Developer options. A lot of people like to speed the feel of their S6 up by setting Window animation scale, Transition animation scale, and Animator duration scale down to 0.5, but there are various other things you can tinker with in Developer options. How to get 100GB of free cloud storage with OneDrive. If you already have an account then sign in on your S6 and tap Apply 100GB Samsung offer, if you don't then head to OneDrive and sign up for free, where you'll get 15GB as standard, which you can boost to 115GB with the offer. You should get it if you buy an unlocked S6 or pick it up through T-Mobile or Sprint. S Finder, USB Storage, Home Screen, Sound, and Find Lost Galaxy S6 How to find things in a hurry Don't scroll around aimlessly searching for that app you're sure you downloaded or that elusive setting that you need to find - use S Finder instead. Pull down the notification shade and tap on S Finder. It will search all your settings, files, apps, and contacts. It's the quick and easy way to find what you're looking for. How to expand storage into your Galaxy S6 quite easily. All you need is a micro USB to USB of Galapter. This . It gives you a USB port that you can plug any USB thumb drive or external hard drive into. You could also get a microSD card to USB adapter for transferring files from your home screen? This allows you to fit more app icons or widgets on there. Just tap and hold on a blank spot on your home screen and then tap Screen grid. By default it's 4×4, but you can select 4×5 or 5×5. If you want more options, then consider installing another launcher. How to boost sound quality You should spend some time customizing your Galaxy S6's sound profile. You'll need to plug in headphones and find a quiet spot, then go to Settings > Sound & notifications > Sound quality and effects and tap Adapt Sound. You'll also find a couple of nifty sound effects in here - SoundAlive+ is meant to create a surround sound effect, and Tube Amp simulates a tube amplifier sound. How to find your lost Galaxy S6 Head into Settings > Lock screen and security > Find My Mobile and log in. You should find that Remote controls is on by default. This enables gou to go to Samsung's Find My Mobile website on any device, log in with your Samsung account details, and make your Galaxy S6 ring as loudly as possible. You'll also find options for Google location service which enables Google to track your phone. This means you can just type "find my phone" into Google if you're logged in with your Google account and it will show you a map with your Beactivation lock, which you'll want to use to prevent people from reactivating your device without your Samsung account details. Easy Mode, Force Restart, Wireless Charging, Cache and Camera Shutter How to enable Easy Mode If the Samsung Galaxy S6 is your first smartphone, or you just want less clutter on the screen, you should consider enabling the phone's Easy Mode. Apps and text are larger in Easy Mode. Email, Phone, and Camera easier to find. You can turn on Easy Mode by going to Settings > Personal > Easy Mode. Scroll down the page, and you'll find toggles for apps you want displayed in this particular mode. To return to the default mode, follow the previously mentioned steps, but choose Standard Mode instead. How to trigger a Forced Restart Unfortunately, there will be times when your device freezes, becomes unresponsive, or begins acting strange. At times like this, a forced restart is your best bet for a quick fix, and the way to trigger it is incredibly easy. Simply press and hold the Volume Down and Power/Lock buttons for several seconds and your Galaxy S6 will restart. How to use Wireless Charging The Samsung Galaxy S6 can be charged using the packed-in cable and plug, or you can charge the device wirelessly, which is likely the more convenient option. The Galaxy S6 supports universal wireless charging and is certified by the WPC (Wireless Power Consortium) and PMA (Power Matters Alliance), meaning it'll work with most — if not all — charging pads you can buy. But if you need one at home or at work, you can order one from Samsung for \$50. How to clear the App Cache The more time you spend with your Galaxy S6, the more the cache will build up. With time, the cache could impact on your device, compromising its performance and slowing it down. You should regularly clear the cache, not just to avoid sluggish performance, but because it may also be the fix you need for some smaller issues you may run into. To clear the cache for. Then, select Storage > Clear Cache. To clear the cache for all apps at once, go to Settings > Storage > Cached Data and hit OK when prompted. How to turn off the Camera Shutter sound. There are a few ways to do this, with the easiest way being to open the Camera app, tap the gear icon to open Settings, then scroll down until you find the Shutter sound. option. Depending on your carrier, this option may or may not be there. If it's not, there are several apps you can download from the Google Play Store to achieve the same result. SilentCam Switch disables the shutter audio, for instance, and Silent Camera gives you an entirely separate camera app to use. Editors' Recommendations
